Metachromatic Leukodystrophy: A Primer

YOUREKA Science has an excellent explanation of the basics of metachromatic leukodystrophy (MLD). The link is listed below:

http://yourekascience.org/portfolio/what-is-mld-metachromatic-leukodystrophy-explained-to-all/

History:
The first report of MLD was in 1933 and is commonly credited to Dr. Joseph Godwin Greenfield, (1884-1958) who was a professor of pathology and clinical medicine in Edinburgh, London. Late infantile MLD was first called Greenfield’s disease. Greenfield’s many publications, books and articles gave him a significant reputation internationally. His first major work in 1921, entitled Pathology of the Nervous System, was co-authored with E. Farquhar Buzzard. His textbook Neuropathology appeared in 1958.
