

Andrew Faught

High School: Brown Deer

Projects: The projects I worked on were the Amyloid Precursor Protein, Maspin, *Brugia malayi* Asparaginyl tRNA Synthetase and Pyruvate Carboxylase.

College: NASCAR Technical Institute

Future Plans: to become a NASCAR Technican and hopefully work my way up to becoming a NASCAR Crew Chief in the Cup Series

Impact of SMART Teams: When I joined SMART Teams my freshman year, I was already interested in science. I joined SMART Teams to get more involved in science and computers. While on Smart Team I did more of that then I thought I would ever be. It allowed me to get involved with actual researchers and work with a computer program that was a little tough to work with, but I got used to it after a few years. I thoroughly enjoyed my time on the Brown Deer High School SMART Team and I wish I could continue to be involved in the program now, but I am unable to. Thank You Dr. Shannon Colton for running a very fun program for hghih school students.
