

Nate Theobald

High School: Kettle Moraine High School

SMART Team project: Aquaporin project in 2003/2004

College/Major: Biomedical Engineering at MSOE; vet school at Tufts Cummings School of Veterinary Medicine

Career Plans: Mixed animal veterinary practice, perhaps in Maine?

Impact of SMART Teams on me: It was a good exercise in working not only with a group of peers, but also researchers, who work at a much higher level of understanding. It was also a good intro to general research theories and journals which has served me well in my research this summer (I should have at least 2 articles published with my name on them, one as first author!)

Favorite Memory: By far the NSTA conference in Atlanta. It was a great opportunity to meet others and share the experience.
